1.   Cloth Shopping Billing System:

Description: Design an application to generate shopping bills based on items purchased and provide discount as per below shopping price:

Price>=10,000 ➔ 40% discount

9999₹- 6000₹ ➔ 30% discount

5999₹- 3000₹ ➔ 18% discount

2999₹- 1₹   ➔ 8% discount

Features:

Display a Console Menu to enter the price of item until user wants to add the item and its price.

Use a loop to allow users to add multiple items to the bill.

Calculate the total bill and display the total and discounted price when the user exits.

2. Grade Calculator:

Description: Create a program that calculates grades for students based on their scores.

Features:

Input scores for multiple subjects using a loop and provide grades based on percentage.

Allow multiple student entries until the user chooses to exit.

Grading Example:

A: 90% and above

B: 89% - 75%

C: 74% - 60%

D: Below 60%

E: below 45%
